

# Jumpering Service

**These days a wide range of high speed commercial applications is available, from simple voice over IP phones and fast broadband services to more complex wide area networks, data networks, entertainment and IP data applications.**

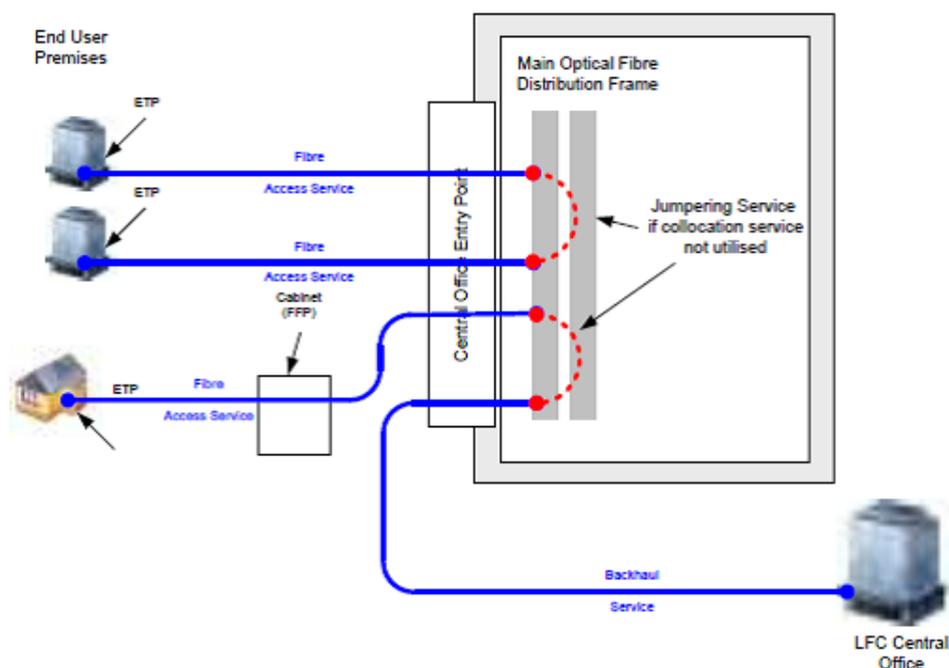

This means you need more flexible solutions to support your customers' needs. Our fibre access services are designed to give you more control over how you deliver ultra-fast broadband services to your customers.

Our Jumpering Service enables this by connecting the end of a fibre access service (such as Direct Fibre or Bandwidth Fibre) to another similar fibre access service, or a backhaul service (such as Intra Candidate Area Backhaul Service or a third party service) at an exchange.

## How does it work?

We connect our basic fibre access services together or to a backhaul services at the main frame of an exchange. You can use this to connect two of your customer sites together, or to your equipment in a distant exchange.

Our Jumpering Service is dark fibre so it does not have any fault monitoring capability, but has full restoration support when a fault is reported. This service has no equipment to limit data transfer speeds across the fibre.

## Benefits

---

We've developed this service so you or your business customers can have more control over the way you deliver of high-speed services, especially the location of equipment. It will probably best suit tailored solutions for large networks.

You can develop applications such as wide area networks including diversity if required. You will also be able to promote the migration of legacy data and voice applications to alternative IP-based services.

## Availability

---

This service can be ordered in any location that fibre access services are available. You can order this service with any fibre access service.

## Pricing

---

Charges for this service include:

- There is no installation charge when ordered with a Chorus fibre access or backhaul services.
- The monthly rental is \$25 per instance.

## How to order

---

You can order Jumpering Service via Online Ordering and Tracking. It can be requested at the time of initial product order for a new connection or a change termination by writing 'Jumpering required' in the job description.
