

Fact Sheet

WE CAN SUPPORT YOU TO BUILD A NETWORK THAT OPERATES WHERE YOU NEED IT AND WORKS HOW YOU WANT IT TO.

You can use our Third Party Access and Distribution service (TPAD) to access your own or another service providers' service in Chorus sites.

Over time the list of services that you will be able to connect to will increase.

Benefits

With our Third Party Access and Distribution Service you can:

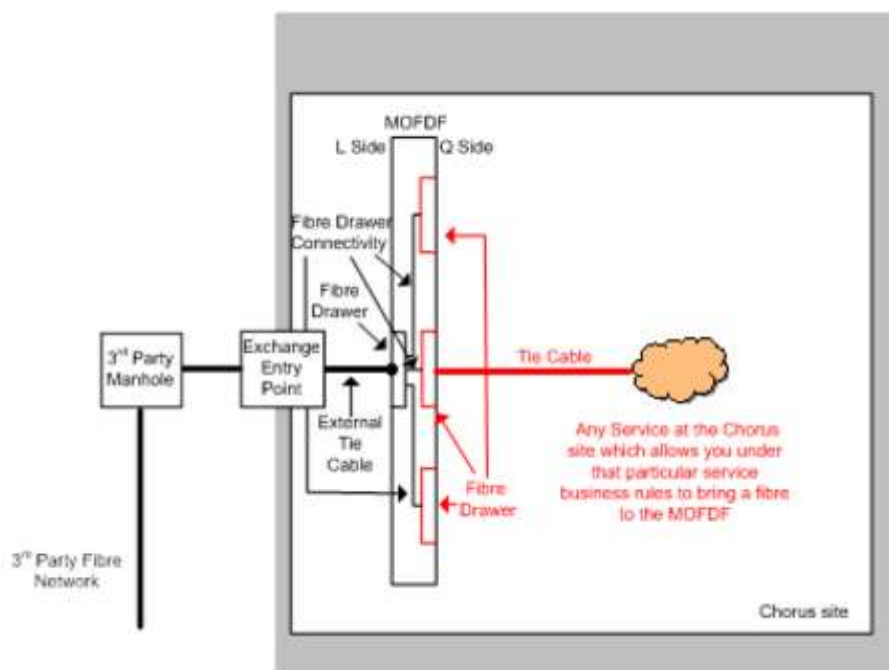

- Provide backhaul for a number of different services that either you, or another service provider own.
- Share backhaul infrastructure across a number of services to reduce costs.

How it works

TPAD allows:

- An external tie cable to come from the Entry Point to the MOFDF at a Chorus site.
- Fibre drawer connectivity between the L and Q side of MOFDF.

We will undertake all work associated with the TPAD service.

Prerequisites

You will need the consent of any other service providers if you are connecting to their service.

Any use of TPAD with any other service (whether provided by Chorus or any other party) must comply with the terms and conditions of that other service.

Availability

Third Party Access and Distribution should be available at all our sites.

More Information

Please contact your Chorus account manager for more information.
